

Security Control Management

Build Secure by Design IT Infrastructure

Inside government agencies, compliance for IT infrastructure is slowed by siloing between fragmented tools for scanning, enforcement, and configuration management. Meanwhile, teams struggle to maintain efficiency as they navigate federated deployments across on-prem, hybrid, and cloud environments.

Sicura provides a shift to security control management (SCM), embedding compliance into every build and every deployment. Sicura brings together automated control assessment, monitoring, remediation, and validation in a single platform that continuously enforces benchmarks. Built for DevOps workflows, Sicura seamlessly integrates compliance with configuration management, providing an end-to-end workflow to rapidly build secure infrastructure.

Initially built to harden on-prem infrastructure at NSA, Sicura today also supports hybrid and cloud environments. With SCM, agencies can meet rigorous security standards, as well as modern expectations for real-time monitoring and enforcement to keep pace with threats.

Sicura is the missing link to automate compliance.

- ✓ Accelerate certification with real-time control enforcement
- ✓ Flexible deployment across on-prem, hybrid, and cloud environments
- ✓ Stop misconfigurations, missed patches, and compliance drift.
- ✓ Platform-agnostic, supporting Windows, Linux, Red Hat, Apache, and more.

Automate ATO, CMMC Level 2.0, DISA STIGs, CIS, and more

Sicura gives engineering teams the tools to find, fix, and continuously enforce security and compliance across complex environments.

Tailored Security Profiles

Map security standards to the unique needs of your environment.

Automated Remediation

Go beyond visibility. Take action to fix issues, on your schedule.

Artifacts, Not Spreadsheets

Generate workflow-ready code for task-based configuration management.

Operationalize Next-Generation Compliance Frameworks

Sicura's Security Control Management (SCM) directly aligns with the DoD's **CSRM-C** and **cATO** initiatives by automating continuous control enforcement and evidence generation. Maintain authorization while meeting the speed and rigor these new frameworks demand.

Deploy Faster with SCM

Customize the environment for every need with a policy-first approach that scales.

Reduce handoffs between teams, tools, and workflows with one platform for end-to-end compliance automation.

Modernize today with compliance workflows tailored for hybrid environments, Microsoft SQL & more.

“

Sicura's SCM solution gives us full visibility and control over our entire infrastructure. We can continuously monitor configurations, detect deviations in real time, and ensure that every system remains secure and compliant. It has become an essential part of our cybersecurity operations.”

- Mark Fitch, Army DevCom C5ISR

Certified
CIS Enforcement
and Remediation

Led by a team with decades of experience in the NSA and DoD, Sicura is the “now what” solution after compliance visibility.
