

FedRAMP for Private Industry

The Federal Risk and Authorization Management Program (FedRAMP) is a government-wide assessment program that provides a common framework for agencies to adopt public cloud-delivered solutions, providing a transparent and repeatable process to validate the security protocols for cloud technologies. Commvault® Cloud for Government is the first and currently only data protection solution to achieve FedRAMP High Authorized status and is proven to meet the most stringent standards set forth by the US government.

ACHIEVING FEDRAMP HIGH

FedRAMP High approval represents the gold standard for security, covering critical automation controls, management oversight, reporting, monitoring, and more. It is an intensive undertaking, requiring a full security audit by an independent 3rd party, the FedRAMP PMO, and the US agency consuming the technology. Solutions must incorporate 421 required security controls and must also agree to continuously monitor their solutions and improve their security stature as new vulnerabilities are created by adversaries.

FedRAMP High*
421 required controls

FedRAMP Moderate
325 Required controls

FedRAMP Low
125 Required controls

FEDRAMP FOR PRIVATE BUSINESSES

For private businesses committed to obtaining the highest data security standards, or whose failure to protect sensitive data can result in adverse business outcomes, penalties, or steep fines, FedRAMP High Authorized solutions offer elevated security controls that can mitigate risk. This includes organizations that contract with federal agencies, who are publicly traded and must meet GAAP reporting requirements with respect to cyber security, or whose data and Intellectual Property (IP) create potential business or national security risks if exposed.

FedRAMP High solutions deliver a stronger security posture to meet the ever-increasing risks of ransomware and attacks on stored private customer data. They deliver both increased confidence and capabilities for private industry to meet mandatory data security compliance regulations, such as the GDPR (governing individual rights to data privacy) and CMMC (governing the protection of Controlled Unclassified Information for the federal government).

ABOUT COMMVAULT CLOUD FOR GOVERNMENT

Commvault Cloud for Government data protection solutions meet FedRAMP High standards. Hosted on Azure Government Cloud, Commvault Cloud is industry proven to keep your SaaS app, endpoint, and hybrid cloud data secure, recoverable, and compliant from today's threats. With enterprise-grade, multi-layered security built-in, Commvault Cloud includes additional access, identification, and incident response controls that can extend beyond federally mandated protocols and requirements.
